

## Environmental Statement

Protecting our environment is a responsibility that Kingsley takes seriously. Being a California based company, Kingsley is environmentally friendly through all manufacturing processes, as are its suppliers.

Kingsley uses steel and aluminum for the majority of our products. Each unit is carefully engineered and designed for the maximum use of materials. Any scrap is recycled and is not sent to landfills.

Painted Kingsley products use an environmentally friendly powder-coat finish. Wet finishes that produce VOC's and toxic substances are not used.

Kingsley products are packaged using cardboard and shrink wrap to meet trucking company specifications, and then are placed on reusable wood pallets for shipping. Whenever possible, products to a single destination are stacked to conserve packaging materials and eliminate unnecessary waste when unpackaged.

Kingsley will continue its efforts to identify practices and processes that could potentially harm the environment and develop methods and procedures to remedy them.
