

## **TMC Furniture Inc. - Environmental Statement**

TMC Furniture is committed to protecting our environment through reducing, reusing, and recycling. We incorporate this philosophy into all aspects of our business, from new product design and development to the packaging materials that protect our furniture on its delivery to you.

- We design and manufacture high quality furniture with long life cycles to help reduce the strain on the environment.
- Our furniture is primarily manufactured using wood – a wonderful material that is renewable, recyclable and biodegradable.
- The northern hardwoods that we select for our furniture come from renewable forests; we do not use wood from endangered tree species.
- Our metal and plastic furniture parts and products contain recycled content. In most products we use SCS and Greenguard certified materials.
- Our adhesives, stains and finishes are designed to minimize harmful emissions – wherever possible we use water based products,
- The scrap materials left over from our furniture production are recycled – thus dramatically reducing landfill requirements.
- Our paper, plastic and wood packaging materials contain recycled content.
- Finished products are shipped on reusable wooden skids; whenever possible, we prefer to ship blanket-wrapped thereby eliminating packaging waste.
- Office waste materials (paper, cardboard, plastic containers, pop cans, etc.) are recycled.
- The TMC office and factory operate in compliance with all applicable EPA and OSHA regulations.
- We identify and use suppliers who also are committed to the environmental policies listed above.

TMC Furniture believes that applying these practices result in a safer, cleaner work environment for employees. To further its commitment to environmental stewardship, TMC is also continually exploring responsible, creative ways to do business in a way to better preserve our natural resources, thus protecting the environment for future generations.
