Environmental Statement

Protecting our environment is a responsibility we all share in the present and into the future. Toledo Furniture strives to be environmentally friendly through its processes, suppliers and products and will continue to adopt practices and methods that are environmentally responsible.

Toledo furniture frames are made of steel and all residual steel from manufacturing is sent to metal scrap dealers and not land filled.

Toledo products are painted using powder coating technology and do not use wet spray products that produce VOC's and associated solvents. Powder paint residuals are appropriately land filled.

Table tops are manufactured using wood and laminate products. One supplier recycles the wood waste from their process to heat their facility.

Products are packed using cardboard and shrink wrap and minimizes the use of these materials thus reducing waste at the installation site.

Finished products are shipped on reusable wooden skids.

Toledo Furniture will continue its efforts to review methods and processes striving to identify new ways to conduct business and protect the environment.
